

Flow of Neighbourhood Projects

Public Aai, District Batai

Plan the budget, ensure 15% SC, 7.5% ST & if money isn't enough, then merge with other existing scheme

Make a request to the DM (official), I don't touch the money.

DM enters, verifies that project is allowed under the rules, and releases the initial 2.5 cr

* DM office hires contractors, pays the bills and oversees the project.

Either roll over the money for next year or give help to other schemes.

will require the most AI optimize

Role of e-Saathi in Flow of Neighbourhood Projects

Digital Fund Allocation
 • Cash Deposits in hand, bss limits dike jaati hai.
 • Automatically updated when money is spent or comes

Streamlined Workflows
 MP logs in and submit problem directly on portal.
 • DA has to either approve or reject the plan in 45 days.

• IA uploads geotagged photos and progress reports at each step of construction before payments clears.
 Pk bich laga dete hai on their end

e-saathi, an official web app/mobile app created by MOSPI, to handle MPLADS process lightly and to paperless make it

Public Transparency & Monitoring

• Citizens can view what projects were completed, approved, and how much spent
 • Used to monitor stalled projects and also track DA missing deadlines

Then DA assigns IA and milestone payments same done through e-saathi.

• Money goes to DA i.e. DM or Collector

→ RBI accounts / Government Accounts

If not full money spent, it doesn't lapse, bit carry over to next year.

from total fund
 15% for SC's
 7.5% for ST's

Sometimes the budget isn't enough so, they can merge with other subsidies

but not all at once, 2.5 cr & the rest when most money has been spent

allots each MP ₹ 5 cr.

December 1993,
 MPLADS, Central Sector Scheme

Central Nodal Agency
 • Fundamental governing body managing the flow, process and direct. (projects)
 • Exclusive to MPLADS

Administered by MOSPI

works on drinking water, education, health, sanitation, roads,

Ministry of Statistics and Programme Implementation

Loopholes to fix:

1) Bio steps 2 & 3 — Price Reduction (Through State PWD SoR & Central Delhi SoR). [SoR - Schedule of Rates]

2) Gatekeeping Delays (45 days)

The AI Solution: A Predictive Bottleneck & SLA Engine tracks file inactivity, forecasts sanction delays based on historical district processing times, and automatically escalates stagnant proposals to state-level monitors once the 45-day window is at risk of being breached.

3) SC/ST Shortfall (15%, 7.5%) — Alerts

4) Predictive Delay Blindness (Delay in Progress, not on milestone)

5) Image Classification (for duplicates)

6) Takeaway - Merge with other schemes to help them or either take help from them.

7) Heatmap - Out of all days in an year, what days were active and what's not is displayed as a heatmap.
